BRICK PLANT TOUR
PROVIDED BY GLEN-GERY CORPORATION

Take a tour of a brick plant. We have manufacturing facilities as close as Manassas, VA or York, PA. Most tours take approximately 2 hours and qualify for 2 AIA Learning Units.

Items observed or discussed during tours include --

Manufacturing

Each brick plant has a certain capability. The surrounding shale or clay typically determines the type of brick being made. You will be able to see how a brick goes from quarry to kiln to cube.

Environmental Sensitivity

As a brick maker, we also have a responsibility to ensure our operations do not have an adverse effect on our surroundings. You will see how we handle everything from air emissions to quarry reclamation.
