

**Big brick.  
Bigger advantages.**

*Adrian Saxon, Woodbury Saxon*

# Big features Big

Wherever brick is used for large structures and long runs, big brick makes sense. By building with large sizes from Glen-Gery, America's foremost brick manufacturer, building owners reduce their material and labor costs—while still enjoying all the advantages of strength, permanence, beauty and design potential that classic brick has to offer.

Larger brick  
means versatility and  
economy.

Builders and building owners in many major construction categories such as education, healthcare, retail, government and financial institutions—maximize their construction dollars by using large size brick from Glen-Gery. Brick in our upsized Viking, Saxon, Titan, Titan Plus, Double Titan and Double Titan Plus products deliver all the lasting grace of smaller size brick, while offering the utmost in design flexibility and budget control.

Adrian Saxon

Strong, enduring and great-looking, versatile large-sized brick is the ideal material selection to create a wide range of architectural details.

# s. benefits.

The big idea is simplicity itself—when larger brick sizes are selected, it takes less time and fewer bricks with less mortar to complete a structure. As such, labor costs for masonry with large brick can be substantially reduced. The cost of the brick is actually less than that of the accessories—mortar, grout, rebar, flashing, caulk, insulation, sealants, cleaning compounds, wire and joint reinforcement.

In addition, Glen-Gery's large brick offers important advantages:

Full aesthetic appeal of modular brick, with the same ability to match existing architectural context.

Genuine, real clay, non-fading brick products.

The same durable color and physical wearing properties of any size brick.

Availability in a wide range of colors and textures.

Multiple green building benefits that can contribute to LEED certification.

## Large brick sizes.

To meet the specific demands of virtually any construction project, Glen-Gery offers large brick in six sizes that deliver permanent construction performance and important project savings.

### **VIKING** *Iberia/Hanley*

# Big savings.

## When smaller brick just doesn't stack up.

The chart below lays out the difference in large brick and suggests the significant savings you can expect when you use it. On average, a mason who can complete 82 square feet of brickwork with modular units (3-5/8" x 2-1/4" x 7-5/8") in a day should be able to install

133 square feet in the same time

with Glen-Gery Titan brick

(3-5/8" x 3-5/8" x 15 5/8").

That's 61 percent more square feet of brick in the wall and results in a shorter time on the job with substantially reduced labor costs. Remember, the larger the job, the greater the potential savings.

### Brick labor comparison chart\*

	MODULAR	VIKING	SAXON	DOUBLE TITAN	TITAN
Units/ft. <sup>2</sup>	6.75	4.50	3.38	1.13	2.25
Units/man-day	550	415	395	125	300
ft. <sup>2</sup> /man-day	82	92	117	115	133

\*Data based on long, straight walls with no openings.  
Can vary based on skill and productivity of mason(s).
